good water sufficient for all purposes.

Mr Chairman and Council.

In bringing before you my report for 1902 I would  
ask you to remember that the report is from May when the  
Council was first formed and not for the whole year.

The Workshops of the district all comply with the Act.

The character of the district is mostly agricultural  
with a fair portion residential. It is hilly with a gradual  
slope towards the sea and is drained principally by the  
Scalby Beck and a few small brooks.

The house accommodation is ample and the working  
classes with one or two exceptions are admirably housed.  
There is no overcrowding in the district whatever. There is  
plenty of open space round about the houses and their  
surroundings are for the most part kept clean.

Before the Council was formed supervision over the erection  
of new houses has been rather scanty.

The Sewerage and Drainage of the outlying parts of  
the district is mainly conducted by means of cesspools. In  
Scalby itself the drainage is maintained by sewers which  
discharge their contents into the Scalby Beck. Most of the new  
houses possess Water Closets which are not in all cases placed  
in the best position.

When the new drainage schemes has been carried out all the  
sewers of Scalby will <sup>be</sup> carried directly into the sea and the  
house drains for slop water and other sewage will be connected  
with the main sewers.

In the houses not possessing Water Closets, privies of  
the pail order are used and here the excrement is deposited  
in ashpits and carried away periodically by the occupier

REPORT OF MEDICAL OFFICER OF HEALTH

TO

SCARLETT URRAH DISTRICT COUNCIL.

THE CHIEF MEDICAL OFFICER AND COUNCIL.

FOR THE QUARTER ENDING 1 MAY 1903 I HAVE  
THE HONOR TO REPORT THAT THE PREVIEWS QUARTER HAS BEEN  
ONE OF THE MOST UNFORTUNATE IN WHICH THE COUNCIL HAS BEEN  
FOR A NUMBER OF YEARS.

THE DEATH RATE FOR THE QUARTER WAS 15.2 PER MILLE,  
WHICH IS THE HIGHEST FOR THE PAST FIVE YEARS.  
THE DEATH RATE FOR THE QUARTER WAS 15.2 PER MILLE,

THE DEATH RATE FOR THE QUARTER WAS 15.2 PER MILLE,  
WHICH IS THE HIGHEST FOR THE PAST FIVE YEARS.

TO THE CHIEF MEDICAL OFFICER AND COUNCIL I HAVE  
THE HONOR TO REPORT THAT THE PREVIEWS QUARTER HAS BEEN

and is generally used as manure on the farms in the district.

The Water supply which I believe is pure and hard, is procured from upland water which is impounded by means of two large reservoirs on Scalby Nabs and from there the water is conveyed by pipes to Scalby. There is a plentiful supply of good water sufficient for all purposes.

The slaughter houses are in private hands and are excellently kept.

The Dairies are very numerous and are situated in the farms supplying milk and are all well kept.

The Workshops of the district all comply with the Act.

During the time covered by the report the following nuisances have been abated, two pigsties at Throxenby reported on and abated, one nuisance reported has not been abated.

The total births for the period are 23, giving a rate of 16.8 per 1000. The total deaths for the time covered are 9, giving a death rate of 6.8 per 1000, only 1 death occurred of a child under 1 year, one between 1 and 5 years, 5 between 25 & 65 years and 2 above 65 years. Three of the deaths occurred at the Barracks, Throxenby.

The District has been markedly free from Infectious Diseases, only 5 cases being notified. Three cases of Diphtheria occurred at Burniston Barracks and were all removed to Scarborough Infectious Hospital. The infected premises at the Barracks were all disinfected and there was no further outbreak. The other two cases notified were cases of Enteric Fever, one was treated privately and every care was taken to prevent the spread, the other case was promptly removed to Scarborough Infectious Hospital and the premises were thoroughly disinfected. Both cases were clearly imported cases.

The Isolation Hospital is Scarborough Infectious Hospital belonging to Scarborough.

In concluding my report I take the opportunity to thank my Inspector Mr W.H.Scott for the great help he has been

The following table summarizes the results of the experiments.

The same supplies will be sent by express to the station at the earliest opportunity.

• but the new VAWC will also have to address the  
concerns raised by the other members of the  
committee that there is no separate  
body to oversee the implementation of the  
VAWC and that the existing committee  
has no separate mandate to oversee the  
implementation of the VAWC.

is giving, as she pointed out to us in her letter.

beverage units sold per average factor unit, 1000 = 8.81 to 8.87
